

Flood Watch – Bancroft District

NEWS

Friday, May 03, 2019
12:30pm

The Ministry of Natural Resources and Forestry (MNRF) - Bancroft District is advising area residents that a Flood Watch is in effect for all of Bancroft District.

Residents of Bancroft District should keep a close watch on conditions, regularly check for updated messages and exercise caution near fast-moving rivers and streams. Please alert any children under your care to these dangers and supervise their activities. Residents who have a historic susceptibility to flooding should take appropriate precautions to protect their property, such as ensuring sump pumps are functioning and securing items that may float away as water levels rise.

MNRF advises extreme caution when using forest access roads for outdoor activities. Many are seasonally inundated with water, prone to washouts, and may be impassable due to current water levels. The public should avoid crossing any submerged roads as there may be a risk to traveler safety. Barricades are erected at roads where known washouts or dangerous driving conditions have been observed.

MNRF is closely monitoring the weather and developing watershed conditions. Further updates will be issued as appropriate.

TECHNICAL INFORMATION

Description of Weather System

This message is being sent on the basis of information received from MNRF - Surface Water Monitoring Centre, MNRF - Aviation Forest Fire and Emergency Management Services, Trent Severn Waterway (TSW) and Environment Canada.

The current weather forecast for the next week is calling for daytime highs ranging from 5°C to 19°C, and night time lows to range from 0°C to 4°C, depending on the weather service. Approximately 10-20mm of rain is forecasted, with 1-3mm of rain expected today, 2-4mm forecasted to fall on Monday, 5-10mm on Tuesday and ~5mm of rain/snow on Thursday.

Description of Current Conditions

Levels and flows in watersheds across the District are trending down. High water remains in some parts of the District: the Gull River through the Town of Minden; on Weslemkoon Lake; along the Little Mississippi River; and the Madawaska River downstream of the Bark Lake dam. Forecasted rainfall amounts may slow the rate of decline, but are not expected to have a significant impact. Typical flood prone areas may continue to experience some flooding.

Although the soil is no longer frozen, rainfall and snowmelt over the past week have reduced the ground's ability to absorb additional runoff and snowmelt. The potential exists for nuisance flooding of roadways, ditches, and low-lying flood-prone areas as the melt progresses. There may be potential for minor ice jam related flooding on some rivers. A close watch on local forecasts and conditions is recommended.

The MNR and TSW continue to closely monitor local lakes and rivers as the freshet progresses. The MNR is in regular communication with partner agencies and water control structure operators, including Conservation Authorities, Ontario Power Generation (OPG), Bracebridge Generation and TSW.

Expiry Date:

This message will expire on 05/06/2019 11:59 PM

Terminology: Notification Levels

WATERSHED CONDITIONS STATEMENT – WATER SAFETY: indicates that high flows, melting ice or other factors could be dangerous for such users as boaters, anglers and swimmers but flooding is not expected

WATERSHED CONDITIONS STATEMENT – FLOOD OUTLOOK: gives early notice of the potential for flooding based on weather forecasts calling for heavy rain, snow melt, high winds or other conditions

FLOOD WATCH: potential for flooding exists within specific watercourses and municipalities

FLOOD WARNING: flooding is imminent or occurring within specific watercourses and municipalities
